

GenAI POC Development

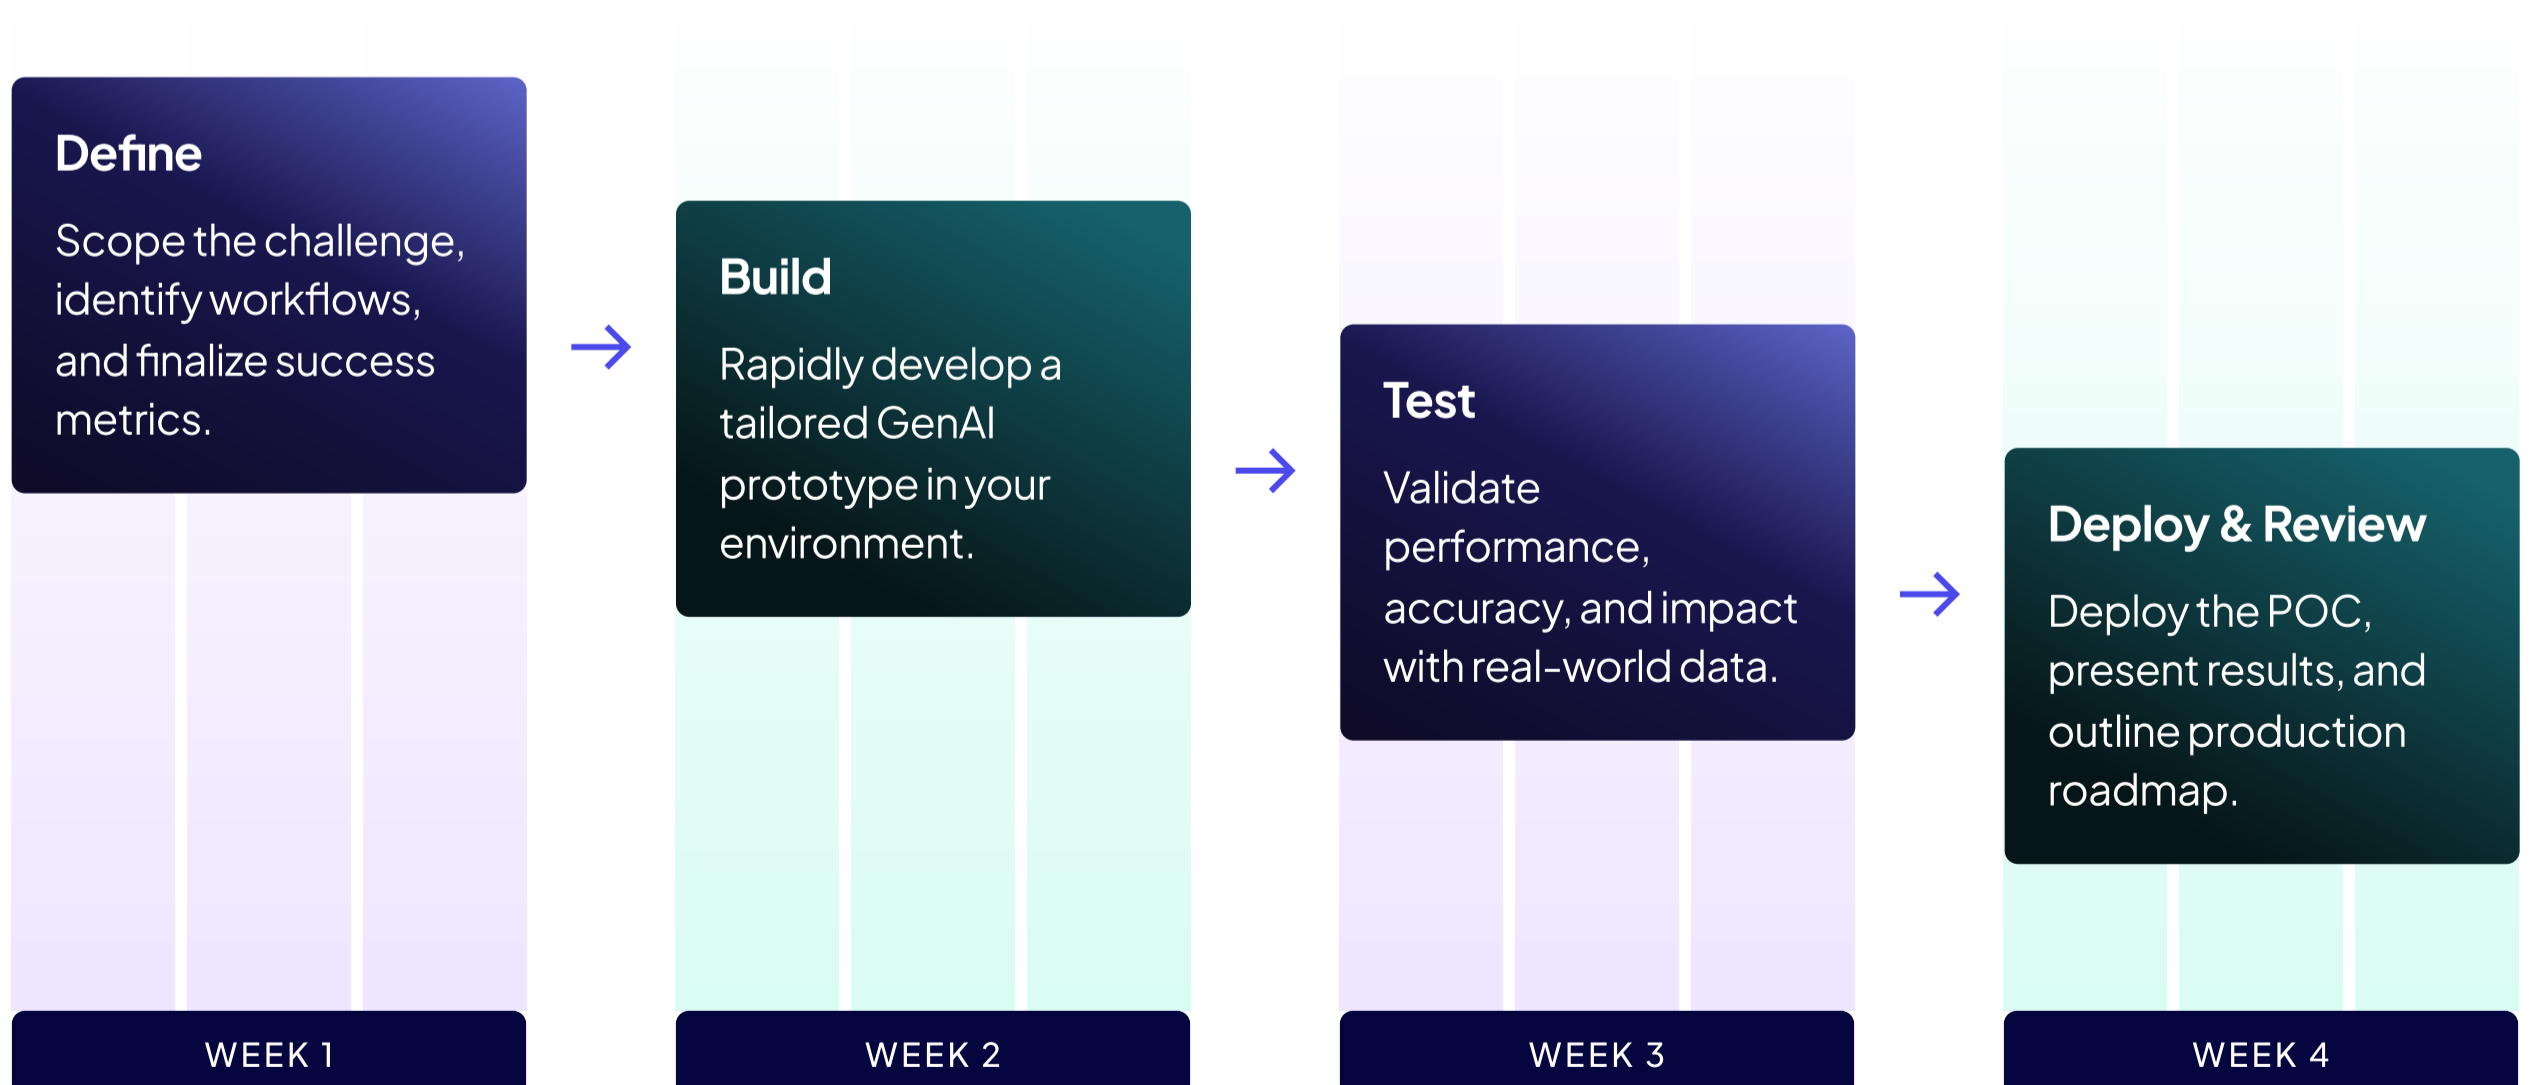

The Challenge

Generative AI is everywhere in theory, but few businesses know how to implement it in practice. The challenge isn't just what to build, but also how to make it work within your existing systems without wasting time or budget. Many SMBs stall at the idea stage or burn money testing tools that never scale.

Our Approach

We de-risk GenAI adoption by running a structured 4-week Proof of Concept (POC) inside your environment. Instead of buying a generic solution, you get a working prototype tied to your real workflows. If you don't yet know what to build, we'll run an AI ideation workshop with a senior AWS Solutions Architect to help identify the right opportunity.

The 4-Week POC Framework

Why Cloudtech?

- ☞ **AWS-backed funding:** Most POCs end up free. AWS covers up to 10% of projected AWS usage, capped at **\$25,000**.
- ☞ **Fast & focused:** In 4 weeks, you see measurable results without heavy upfront investment.
- ☞ **Native to your stack:** No SaaS lock-in. Solutions are built in your cloud, tuned to your data.
- ☞ **Future-ready:** What starts as a POC becomes a production-ready, cost-efficient system.

Trusted By

Cloudtech is trusted by forward-thinking businesses across industries, including:

Who We Work With

We partner with **small and medium-sized businesses** that want to unlock the true value of cloud and AI — helping them move from exploration to execution with speed, clarity, and impact.

What This Means for You

- 💡 Get clarity on where GenAI fits in your business.
- 📅 Validate impact in weeks, not months.
- 📈 Build a strong business case for scaling with AWS-backed funding.

Ready to See It in Action?

The best way to understand GenAI's potential is to see it working against your own challenges. Book a call and let's scope your 4-week POC today.
